Software Developer (Intern / Full-Time) Assignment

GrowEasy

Website: https://groweasy.ai

Work Mode: Work From Home (WFH)

Joining: Immediate

Compensation

Internship

- ₹15,000 – ₹20,000 per month

Full-Time

- ₹35,000 – ₹50,000 per month
- For full-time roles, a minimum of **one year of post-graduation** experience at an organisation is required.

Submission Instructions

Please complete the assignment below and submit the following to:

varun@groweasy.ai

Your email must include:

- Hosted application URL
- GitHub repository URL
- Position you are applying for:
    - **Software Developer Intern**, or
    - **Software Developer (Full-Time)**

Submission Deadline: 12 July 2026

Assignment Overview

Build an AI-powered CSV Importer that can intelligently extract CRM lead information from **any valid CSV format**.

The challenge is **not** parsing CSV files.

The challenge is allowing users to upload CSVs with **different column names, layouts, and structures**, while your system accurately maps and extracts the required CRM fields using AI.

For example, these should all work:

- Facebook Lead Export
- Google Ads Export
- Excel sheets
- Real Estate CRM exports
- Sales reports
- Marketing agency CSVs
- Manually created spreadsheets

Your application should identify the appropriate fields and convert them into GrowEasy CRM format.

Functional Requirements

The project consists of both a Frontend and Backend.

Frontend Requirements

Create a responsive web application.

Step 1 — Upload CSV

Allow users to upload a valid CSV file.

Examples:

- Drag & Drop upload
- File Picker

Step 2 — Preview

After upload:

- Parse the CSV
- Show a preview of uploaded rows
- Display data inside a beautiful responsive table
- Table should support:
  - Horizontal scrolling
  - Vertical scrolling
  - Sticky headers (preferred)
  - Responsive design

No AI processing should happen yet.

Step 3 — Confirm Import

Provide a **Confirm** button.

Only after confirmation should the frontend call the backend API.

Step 4 — Display Parsed Result

Backend returns AI-extracted CRM records.

Display the parsed result in another responsive table.

Show:

- Successfully parsed records
- Skipped records (if any)
- Total imported
- Total skipped

Backend Requirements

Create APIs that:

1. Accept CSV Upload

Accept any valid CSV file.

Do **not** assume column names are fixed.

---

2. Parse CSV

Convert the CSV into records.

---

3. AI Extraction

Send records to an AI model in batches.

The AI should intelligently map available fields into GrowEasy CRM format.

You may use OpenAI, Gemini, Claude, or any equivalent LLM.

---

4. Return Structured JSON

Return extracted CRM records in JSON format.

CRM Fields

Your AI should extract as many of the following fields as possible.

Field	Description
created_at	Lead creation date
name	Lead name

email	Primary email
country_code	Country code
mobile_without_country_code	Mobile number
company	Company name
city	City
state	State
country	Country
lead_owner	Lead owner
crm_status	Lead status
crm_note	Notes/remarks
data_source	Source
possession_time	Property possession time
description	Additional description

Sample CRM Records

created_at,name,email,country_code,mobile_without_country_code,company,city,state,country,lead_owner,crm_status,crm_note,data_source,possession_time,description

2026-05-13 14:20:48,John Doe,john.doe@example.com,+91,9876543210,GrowEasy,Mumbai,Maharashtra,India,test@gmail.com,GOOD_LEAD_FOLLOW_UP,Client is asking to reschedule demo,,,

2026-05-13 14:25:30,Sarah Johnson,sarah.johnson@example.com,+91,9876543211,Tech Solutions,Bangalore,Karnataka,India,test@gmail.com,DID_NOT_CONNECT,"Person was busy, will try again next week",,,

2026-05-13 14:30:15,Rajesh Patel,rajesh.patel@example.com,+91,9876543212,Startup Inc,Delhi,Delhi,India,test@gmail.com,BAD_LEAD,Not interested in our services,,,

2026-05-13 14:35:22,Priya Singh,priya.singh@example.com,+91,9876543213,Enterprise Corp,Pune,Maharashtra,India,test@gmail.com,SALE_DONE,"Deal closed, onboarding in progress",,,

---

AI Instructions

Your AI should follow these rules while extracting records.

1. Allowed CRM Status Values

Only use one of:

- GOOD_LEAD_FOLLOW_UP
- DID_NOT_CONNECT
- BAD_LEAD
- SALE_DONE

---

2. Allowed Data Source Values

Only use one of:

- leads_on_demand
- meridian_tower
- eden_park
- varah_swamy
- sarjapur_plots

If none match confidently, leave it blank.

---

3. Date Format

`created_at` must be convertible using JavaScript:

new Date(created_at)

---

4. CRM Notes

Use `crm_note` for:

- Remarks
- Follow-up notes
- Additional comments
- Extra phone numbers

- Extra email addresses
- Any useful information that doesn't fit another field

---

5. Multiple Emails or Mobile Numbers

If multiple email addresses exist:

- Use the first email.
- Append remaining emails into `crm_note`.

If multiple mobile numbers exist:

- Use the first mobile.
- Append remaining numbers into `crm_note`.

---

6. CSV Compatibility

Each record must remain a single CSV row.

Avoid introducing unintended line breaks.

If line breaks are necessary, escape them appropriately (for example, `\n`) so the CSV remains valid.

---

7. Skip Invalid Records

If a record contains **neither**:

- email

nor

- mobile number

then skip that record.

Evaluation Criteria

Candidates will primarily be evaluated on the following:

AI Prompt Engineering

- Ability to extract fields accurately
- Intelligent field mapping
- Handling messy datasets
- Handling ambiguous columns

Backend Quality

- API design
- Clean architecture
- Error handling
- Batch processing
- Maintainable code

Frontend Quality

- Modern UI
- Responsive layout
- Clean UX
- CSV preview experience
- Loading states
- Error handling

Code Quality

- Readability
- Type safety
- Folder structure
- Reusability
- Best practices

Overall Engineering

- Performance
- Edge case handling
- Production readiness

Bonus Points

Additional credit will be given for implementing:

- Drag & Drop upload
- Progress indicators during AI processing
- Streaming or incremental parsing
- Retry mechanism for failed AI batches
- Virtualized table for large CSVs
- Dark mode
- Unit tests
- Docker setup
- Deployment using Vercel, Railway, Render, or similar platforms
- Well-written README with setup instructions

Tech Stack

Frontend

- Next.js

Backend

- Node.js
- Express

AI

- OpenAI
- Gemini
- Claude
- Any equivalent LLM

Database (Optional)

Use any database if required, or keep the project stateless.

Final Submission Checklist

Before submitting, ensure you have included:

- Publicly hosted application
- Public GitHub repository
- README containing setup instructions
- Position applied for (Intern / Full-Time)

Email everything to:

varun@groweasy.ai

We look forward to reviewing your submission. Good luck!
